

## **Trackman**

### **What is TrackMan?**

TrackMan provides the platform that helps you improve your golf game whether you are a Tour Pro or a Sunday golfer looking to cut a few strokes off your round. We have provided ball flight data and swing analysis to the professional golf industry since 2003. Manufacturers, tour pros, teachers, students and range facilities all take advantage of the TrackMan numbers on a daily basis.

### **How It Works?**

The TrackMan radar unit tracks the trajectory of your golf ball from launch to landing. The ability to measure the full ball flight is essential to produce the highest quality data.

The golf radar can pick up valuable information about your club head, giving a precise picture of the club during ball impact. With this knowledge, you can easily determine how your club face or swing path needs to be adjusted. The technology used is called doppler radar and has been widely used in military applications to track missiles and projectiles since the 1960s.

### **What Are TrackMan Numbers?**

The TrackMan technology provides you with the most accurate feedback in the industry. The TrackMan numbers are divided into 2 main categories; ball flight data and club data. Knowing your TrackMan numbers is essential to understand and improve your golf swing. Regardless of level all golfers can benefit from using TrackMan as part of their training. Working on your golf swing and resulting ball flight through your TrackMan numbers, allows problem areas to be identified, resulting in fast improvement.

Examples:

Ball Speed

Spin Rate

## **Easy Access To Your TrackMan Numbers**

To get the maximum benefit from your TrackMan training requires access to your TrackMan numbers in the easiest possible way. When you access [mytrackman.com](http://mytrackman.com) it will automatically adapt to your preferred device, whether it is a smartphone, laptop or tablet. You will now have access to your TrackMan numbers where ever you are.
